Once you are finished inputting requisitions, you will need to send a message for processing action. Most people believe their requisition is submitted at the input screen and that their requisitions were accepted and submitted. However it is not until you go to the communications option: send/Receive and click on this option that the requisition is actually submitted.

Click on Send/receive bottom to send requisitions and to retrieve information. Please note that DAMES can be used to generated A0_ transactions, D6MRAD, QB1, blank form 1348 and under the narrative option you can generate A0E's, RODs, and Messages. When you established your account a generic PLAID address list was assigned to you based on your COMMRI/Service/Account.

If your transmittal was unsuccessful, you will get a connection failed notice. Please try resubmitting by performing the send/receive step again. If you are still having problems, you might check with the APD/systems people on your base to ensure that your modem connection is step up correctly.

Retrieving Information: To retrieve status transactions or message data, you will have to hit the send/receive option again. Screen down processing file option click on the appropriate button.

Other Capabilities: There are other options which were not discussed in this charter: (1) how to initially set up your password and (2) how to change phone numbers for your modem. If you need assistance please feel free to call the DAASC help desk @ DSN 986-3247 or print/read the complete DAMES manual called "about VOLTS".
